

Integration Challenges

Combining similar data from multiple sources sounds simple but has become a major challenge in organizations due to the sheer number of disparate data sources and volumes of data that exists. Add another level of complexity with unstructured data formats and companies are now faced with the real challenge in today's competitive marketplace. At the same time, effectively capturing, managing and leveraging data to derive meaningful business intelligence (BI) is a major requirement for enterprises today. In order to successfully guide both current and future decisions, all levels of management must have control over their data and the business metrics it creates.

Value Proposition

Orion Ventures can help your organization streamline all phases of **data migration, conversion and transformation** through the use of state-of-the-art ETL tools. Starting from source data system analysis to performance centric data loading processes, we leverage our expertise and experience to get your data organized and available for data analysis by the business user community. The result is a 360 degree view of your business with automated tools that allow you to access any type of data (structured or unstructured) from virtually any source.

Benefits: Through the use of our comprehensive data integration services, customers can derive maximum value from all their corporate data while simplifying and lowering the costs of their IT efforts. This will result in the following benefits:

- **Receive trusted up-to-date information within a consolidated organizational view.**
- **Improve the accuracy of your information and facilitate trending and analysis.**
- **Support better decision-making using more timely and integrated information.**
- **Facilitate end-to-end information delivery through seamless processes.**
- **Achieve lower total deployment costs.**
